## ARSENOPYRITE NEUTRALIZER

**GOLDEN  
AXXION**  
CONSULTING AND PRODUCTS IN METALLURGY

A combination of **alkaline acid-neutralizing agents, anionic agents, and rheological agents** that counteract the nitrogenous base of arsenic, lead, and calcium arsenates found in mines.

It is also used to help break the bonds of some refractory minerals such as pyrite, arsenopyrite, etc.

TECHNICAL SPECIFICATIONS	
APARIENCIA	Translucent lilac liquid.
OLOR	Typical of extreme alkalis.
SEDIMENTACIÓN	None
pH	11
pH DE TRABAJO	12.5
GRAVEDAD ESPECÍFICA	1.1.
SOLUBILIDAD	In all proportions
APLICACIÓN	<ul style="list-style-type: none"><li>• Inhibit arsenic in leaching.</li><li>• Oxidize arsenopyrite before flotation.</li></ul>
DOSIFICACIÓN	2 L per 1 MT of mineral or as recommended by the amount of arsenic present.

TECHNICAL SPECIFICATIONS	
INGREDIENTES ACTIVOS	Products with alkaline bases.
PRESENTACIÓN	<ul style="list-style-type: none"><li>• 25-liter drum.</li><li>• 50-liter drum.</li><li>• 200-liter drum.</li><li>• 1000-liter isotank.</li></ul>
OBSERVACIÓN	Read the usage protocols before applying.
PRECAUCIONES	<ul style="list-style-type: none"><li>• Do not mix the product with other substances</li><li>• Read the reagent's SDS before use.</li><li>• Wear gloves, protect your eyes, and use in well-ventilated areas. Observe industrial safety regulations.</li></ul>
FECHA DE REVISIÓN	03/25/2025

**Created with environmental benefits and human health in mind.**

AXXION products are guaranteed to be harmless to nature and humans.

 We work for sustainable mining

**GOLDEN AXXION** is a company that seeks high levels of value for the entire mining development chain, always ensuring respect and preservation of the different manifestations of life.
